PARTNER STRATEGY / EXECUTIVE STORY

The building is not the business outcome.

From Cisco product dashboards and isolated workplace projects to enterprise-wide, measurable value streams.

Discover → Validate → Design → Realise → Expand

Cognitive Value Selling | Intelligent Workplaces • Smart Buildings • Retail • Manufacturing

Multiple excellent dashboards. No shared economic decision.

Product intelligence is useful—but by itself it rarely connects functional teams to a board-level value pool.

CISCO SPACES

Occupancy & flow

space activity

WEBEX WORKSPACES

Rooms & experience

room utilisation

SPLUNK

Events & performance

service health

BMS / CAFM / HR

Plant, tickets, people

asset status

BOARD / CFO

What changed in our cost, growth, risk or experience?

Missing connective tissue

Cross-functional objectives • economic baseline • correlated evidence • ownership of decisions • proof of value

Reverse the selling sequence.

Keep product demonstrations—but make them evidence in an outcome-led investment narrative.

BOTTOM-UP / PRODUCT-FIRST

- **Feature demo**
- Technical requirement
- Departmental budget
- Project deployment
- Benefits assumed

one-off deal + partial ownership

TOP-DOWN / OUTCOME-FIRST

- Board objective
- Enterprise value pool
- Multi-persona hypothesis
- Validated intervention
- **Measured & expanded value**

end-to-end, recurring value relationship

Board priorities appear differently in every function.

A single strategic commitment becomes different decisions, owners, measures and constraints across the customer.

BOARD INTENT	VALUE STREAM / LEVERS	OPERATING OWNERS	PROOF OF VALUE
DECARBONISE	Energy intensity, emissions	Estates / ESG / Finance	**kWh • tCO_2e • £**
IMPROVE PRODUCTIVITY	Better work & inclusion	HR / Digital / Accessibility	**friction • experience • accessibility**
OPERATE RESILIENTLY	Prevent disruption	IT / Security / Facilities	**availability • incidents • MTTR**
RELEASE CAPITAL	Improve estate return	CFO / CRE / Operations	**£/m^2 • utilisation • cash**

Stakeholder alignment is not a stakeholder list; it is agreement on shared measures, trade-offs and who is authorised to act.

The building is one lever inside the customer's end-to-end value stream.

Start at the industry economic engine and trace where space, people, assets and operations influence it.

CORPORATE WORKPLACE

Attract › Enable work › Collaborate › Serve customers › Retain talent

Quality of work • estate cost • inclusion

RETAIL

Attract shoppers › Enter & browse › Convert › Fulfil › Retain

Conversion • basket • shrink • energy/store

MANUFACTURING

Plan › Source › Produce › Deliver › Service

OEE • cost/unit • safety • downtime

Smart building ≠ value stream. The building supplies interventions and evidence to improve the value stream.

A value twin before the digital twin.

An economic and decision model can be useful long before a detailed geometric or operational twin exists.

1 BUSINESS INTENT
Outcomes & value pools

2 SIGNALS
What is observed

3 DECISIONS
People, ownership, trade-offs

4 ACTIONS
Processes & technology change

5 VALUE REALISED
Measurement & feedback

Not BIM-first

Value-led hypotheses first

Twin maturity

Grow only where justified

A sensor reading is a fact. Business value is a tested interpretation.

Correlate observations across domains; distinguish patterns from causes, and design experiments before promising impact.

- **Cisco Spaces** — occupancy pattern
- **Webex** — room use & experience
- **BMS / meters** — HVAC energy draw
- **CAFM** — service tickets
- **HR / survey** — experience & inclusion
- **Finance / leases** — cost base

CROSS-SIGNAL REASONING

When & where do behaviours, costs and failures coincide?

HYPOTHESIS A

Conditioned space is underused at certain times

HYPOTHESIS B

Meeting friction arises from mismatched capacity

HYPOTHESIS C

Access barriers affect some employees disproportionately

TEST BEFORE CLAIMING: baseline → confounders → controlled change → result → economic attribution

One board commitment. Six different operating decisions.

Illustrative mandate: reduce estate emissions and cost while protecting an inclusive, productive workplace.

BOARD MANDATE "Deliver a lower-carbon, more productive and accessible workplace—without degrading service."

CFO

Which benefit is cashable?

net cost / avoided capex

CRE / PROPERTY

Which space can change?

£/m² / lease options

FACILITIES

What can operate differently?

kWh / comfort / tickets

CHRO

Is work better for people?

experience / friction

ACCESSIBILITY

Who is excluded today?

barrier resolution / audit

CIO / CISO

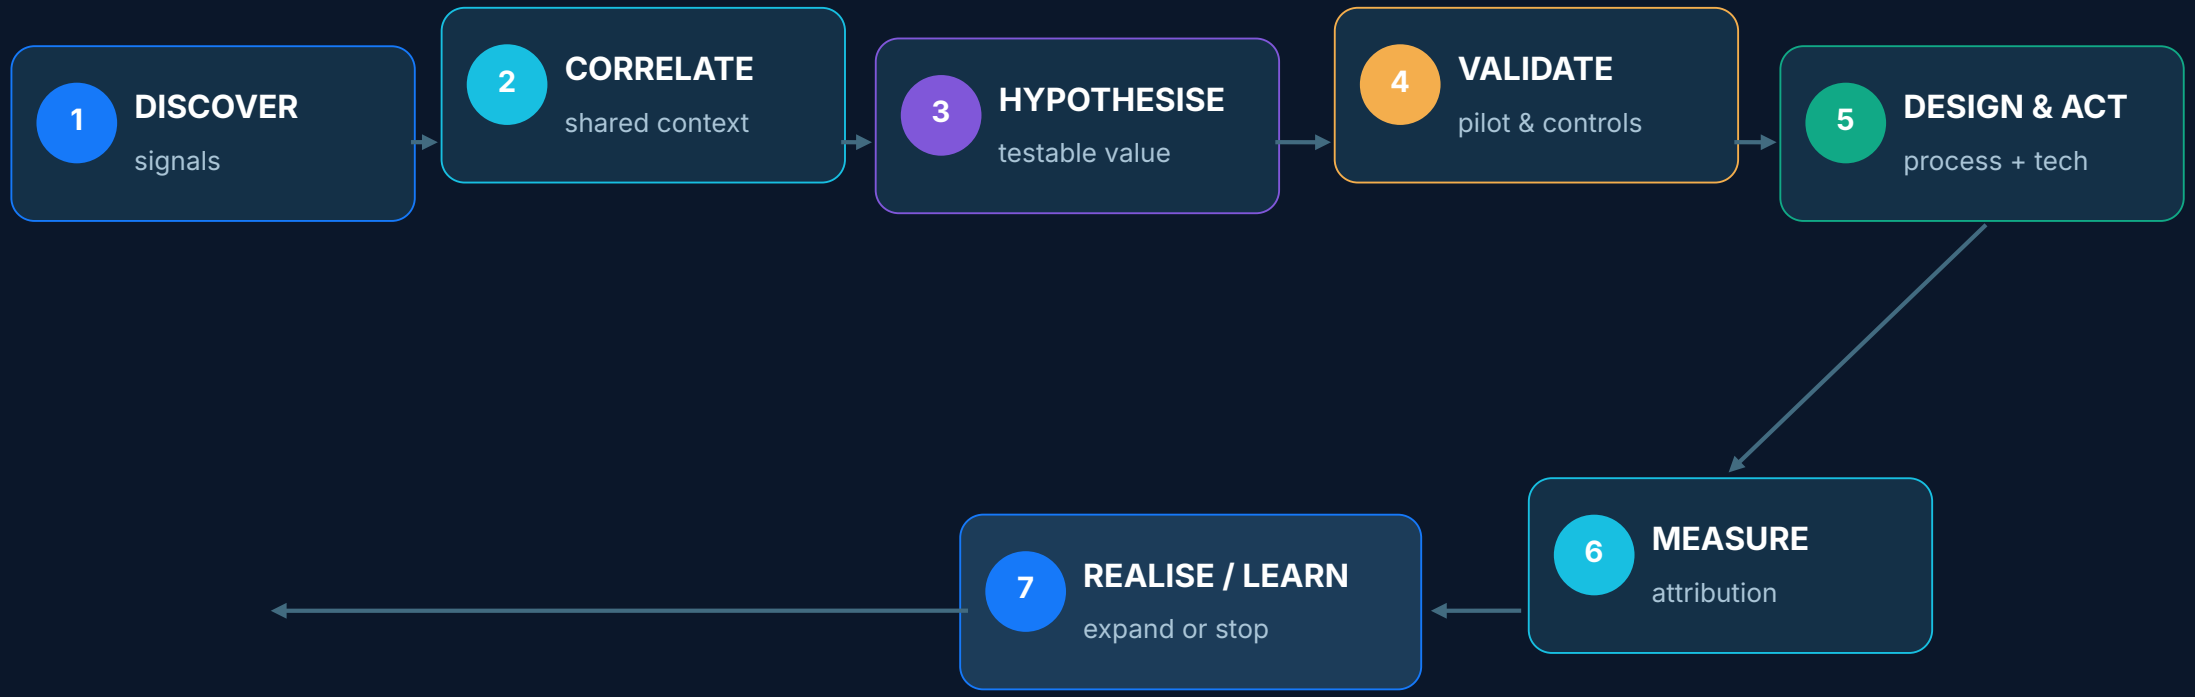

Is integration safe and viable?

control / uptime / privacy

Cross-functional trade-offs must be made explicit: accessibility, privacy and employee wellbeing are constraints, not optional savings levers.

From observed change to accountable business improvement.

Move beyond a dashboard to a governed learning loop that is repeated across sites and value streams.

OWNER • EVIDENCE • ACTION • COUNTERFACTUAL • VERIFIED BENEFIT

An illustrative workplace hypothesis—not a promised ROI.

20-site synthetic estate: occupancy, HVAC schedules, workplace needs and lease economics do not line up.

SYNTHETIC DATA

28%

average observed space use

70% peak-day utilisation

(hypothetical, not customer data)

OBSERVE

Teams cluster Tue–Thu; plant schedules remain nearly unchanged

TEST

Temporarily adjust low-demand zones within comfort and inclusion guardrails

DECIDE

Retain, re-zone or release space only after usage and experience validation

MEASURE

Metered kWh, comfort, accessibility feedback, service levels and actual lease cost

Benefits ledger: confirmed operating expense reduction + realised estate change – integration, transition and operating costs; prevent double-counting.

Capabilities follow the intervention—not the presentation.

Cisco has important building blocks. BMS, workplace, real-estate and enterprise processes require the wider ecosystem.

CUSTOMER SIGNALS	BMS / meters / FM • HR & employee experience • lease & finance • retail / MES / ERP
CISCO EVIDENCE & ASSURANCE	Cisco Spaces • Webex Control Hub • Splunk / ITSI • ThousandEyes • Catalyst / Meraki
PARTNER VALUE INTELLIGENCE	Semantic model • evidence fusion • financial attribution • persona / value stream model
DECISIONS & OPERATIONS	Facilities / BMS actions • HR and workplace changes • security response • managed optimisation

Product capabilities shown are illustrative components, not a claim of native out-of-the-box end-to-end integration or automated control.

The partner monetises the continuum—not just the installation.

Different businesses capture value at different points: advisory, integration, managed operations and continuous optimisation.

DISCOVER	VALIDATE	OPERATE	OPTIMISE
Value discovery & baseline	**Data integration & pilots**	**Assurance, control & support**	**Outcomes and multi-site scale**
assessment / advisory fee	integration / project margin	managed recurring fees	subscription / gain-share*

CUSTOMER	verified ROI / risk	**PARTNER**	services margin / ARR	**CISCO**	relevant architecture / adoption

*Performance-linked terms require auditable baselines, attribution, caps and risk-sharing; not appropriate for every case.

Same value-selling method. Different enterprise outcomes.

Smart buildings widen the conversation only when tied to what economically matters in each industry.

OFFICE / IWE

Enterprise productivity & estate economics

CORRELATED EVIDENCE

Presence + booking + comfort + lease

£/m² • employee friction • emissions

RETAIL

Conversion & profitable store operations

CORRELATED EVIDENCE

Footfall + checkout + refrigeration + labour

conversion • shrink • energy/store

MANUFACTURING

Throughput & resilient site operations

CORRELATED EVIDENCE

Machine state + HVAC + quality + safety

OEE • cost/unit • downtime

These are opportunity maps, not benchmarks: the customer's industry, sites and business model determine the actual value case.

Run a value-aligned pilot—then earn the right to scale.

Illustrative 90-day co-sell sprint for a customer, integrator and Cisco account team.

WEEKS 1–2

ALIGN

Board sponsor + baseline

priority + data rights

WEEKS 3–4

MODEL

Value streams + hypotheses

evidence register

WEEKS 5–8

TEST

Controlled operational pilot

guardrails + comparator

WEEKS 9–12

PROVE

Attribution + architecture

investment case + roadmap

Joint ownership: customer validates outcomes & access • partner designs/operates • Cisco validates portfolio relevance and technical fit

THE EXECUTIVE CONVERSATION

What would you change if we could prove the value?

01 Which enterprise outcome matters most?

02 Which teams own the decision and the evidence?

03 What hypothesis can we safely test in 90 days?

Value first • Signals as evidence • Cross-functional decisions • Validated benefits • Capabilities by design

Sources, boundaries and measurement principles.

Product capabilities verified from first-party material; all worked-case financial figures and scenarios are illustrative.
